Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              All repeats were identified using RepeatMasker:

(1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VECTOR: pBACe3.6

WETCHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-62B4. Actual start of this clone is at base position 1 of RP11-389E17; actual end is at base position 206966 of RP11-389E17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mapping information for this clone was provided by Dr. John D. Werberson. Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
Direct Submission

University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
On Feb 16, 2001 this sequence version replaced gi:11761497.
                                                                                                                                                                                                                                                                                                                                                                                    NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                     Center: Washington University Genome Sequencing Center

\* NOTE: This record contains 73 individual

```
sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2486; gap of 100 bp 13187; contig of 701 bp in length 13988; contig of 701 bp in length 4088; gap of 100 bp 14795; contig of 707 bp in length 495; gap of 100 bp 1532; contig of 637 bp in length 15532; contig of 637 bp in length 16347; contig of 715 bp in length

together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                              HS931E15
Human DNA sequence from clone 931E15 on chromosome Xq25. Contains STSS, GSSs and genomic marker DXS8098, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group.                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        http://www.sanger.ac.uk/HGP/ChrX
931E15 is from the library RPCI5 constructed at the Roswell Park
Cancer Institute by the group of Pieter de Jong. For further
details see http://Dacpac.med.buffalo.edu/ VECTOR: pCYPAC2
IMPORTANT: This sequence is not the entire insert of clone 931E15.
It may be shorter because we only sequence overlapping sections
once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (24-SEP-1998) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Sep 18, 1998 this sequence version replaced gi:3550203.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            neighbouring submissions.

on Sep 27, 2000 this sequence version replaced gi:6006528.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; T:, TREMBL; WP:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 http://www.sanger.ac.uk/Projects/C_elegans/wormpep IMPORTANT: This sequence is not the entire insert of clone RP1-247C2 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true left end of clone RP1-247C2 is at 1 in this sequence. The true left end of clone RP1-879J8 is at 98261 in this sequence. The true right end of clone RP5-8866 is at 4651 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RPI-247C2 is from the flurther details see
                                                                                                                                                                     HSDJ247C2 98360 bp DNA linear PRI 03-AUG-2001 Human DNA sequence from clone RP1-247C2 on chromosome 11p13 Contains STSs and GSSs, complete sequence.

It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        * NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Contact: sequence_submissions@genome.wi.mit.edu

(HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, by administering a compound that modulates LXR-or RXR-mediated transcriptional activity -

Claim 8; Fig 1; 317pp; English.

Ø The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABCI expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.

Adenosine triphosphate (ATP) binding cassette (ABC) polynucleotide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis

Claim 1; Page 143-144; 215pp; English.

The present sequence represents the 5' flanking region of the huuman adenosine triphosphate (ATP) binding cassette protein (ABC) 1 gene. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9422-941. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of and atherosclerosis. The genes associated with hypercholesterolemia and atherosclerosis that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for with cholesterol transport.

ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular chlosterol stores, ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9422-9431. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated

The present invention describes primer sets for synthesising 5602

(111-length cDNAs defined in the specification. Where a primer set

(211-length cDNAs defined in the specification. Where a primer set

(211-length cDNAs defined in the specification comprises one of

(212-comprises: (3) an oligoned sequence defined in the specification, where the

(213-complementary strand of a polynucleotide which comprises a 5'-end

(213-complementary strand of a polynucleotide which comprises a 5'-end

(213-complementary strand of a polynucleotide which comprises a 5'-end

(213-complementary strand of a polynucleotide which comprises a 5'-end

(213-complementary strand of a polynucleotide which comprises a 5'-end

(213-complementary strand of a polynucleotide which comprises a 1'-end sequence where the

(213-complementary strand of a polynucleotide complementary to a

(213-complementary strand of a polynucleotide sometheate of the 5'-end

(213-complementary strand sequence is selected from those defined in

(214-complementary). The primers are used in antisense therapy and

(3)-complementary full-length cDNAs. The primers are used in antisense therapy and

(3)-complementary full-length cDNAs. The primers are used in antisense therapy and

(4)-complementary full-length cDNAs. The primers are used in antisense therapy and

(5)-complementary full-length cDNAs. The primers allow obtaining of the full-length

(5)-complementary full-length cDNAs. The primers allow obtaining of the AHH3632

(6)-complementary full-length cDNAs. The primers allow obtaining of the full-length

(6)-complementary full-length cDNAs. The primers allow obtaining of the proteins encoded by

(7)-complementary full-length cDNAs. The primers allow obtaining of the proteins encoded by

(8)-complementary full-length cDNAs. The primers are used in the exemplification

(8)-complementary full-length cDNAs and AHH3632
                                                                                                                                                                                                                                                                                                                                                                                                                    Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Yamamoto J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Saito K, Ya

comprises: (a) an oligo-dT primer and an oligonucleotide complementary comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprising a sequence complementary to the comprising a sequence complementary to the comprising a sequence complementary to the sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the polynucleotide which comprises a 3'-end sequence, where the polynucleotide which comprises a 3'-end sequence, where the compined which comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the primers are also useful for the detection and/or diagnosis of the primers allow obtaining of the full-length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                       cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH1842 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; ATP binding cassette transporter 1; ABC1; coronary heart disease;

The invention relates to four common polymorphisms in the gene encoding ATP-binding cassette transporter-1 (ABC1). ABC1 is associated with decreased ApoA-1 mediated efflux of cholesterol. The polymorphisms in ABC1 directly affects cellular lipid homeostasis, which is a key factor in the atherogenetic processes. The ABC1 polymorphisms are useful for diagnosing and treating lipid disorders, cardiovascular diseases (coronary heart disease, atherosclerosis) and inflammatory diseases (psoriasis, lupus erythematosus). The identification of ABC1 as a transporter for interleukin-1beta (IL-1beta) identifies this gene as a candidate for treatment of inflammatory diseases including rheumatoid arthritis and septic shock. The present sequence is human ABC1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2887 aaaccccgtaattgcgagcgagagtgagtggggccgggacccgcagagccgagccgaccc 2946

triphosphate (ATP) binding cassette transporter 1 (ABC1) protein (see AAM50227). The sequence includes an extended open reading an alternative ATC codon as initiation codon and thereby adding an alternative ATC codon as initiation codon and thereby adding an alternative ATC codon as initiation codon and thereby adding an alternative ATC codon as initiation codon and thereby adding an extra 40 N-terminal amino acids to the encoded ABC1 protein (see AAM5028). The invention provides 4 common polymorphisms in the ABC1 gene. These were identified by sequencing the ABC1 gene in different Tangler kindreds. In the variant genes (numbering as in ABC1) gene. These were identified by sequencing the ABC1 gene in different Tangler kindreds. In the variant genes (numbering as in ABC1) gene. The sequence of ABC1 and therefore position 136, As is changed to G at position 5589 or G is changed to C at position 136, and the amino acid sequence of ABC1 and therefore may affect its function. The 2 most common polymorphisms (G596A) and A2589G) are both associated with a decreased in vitro ApoA-1 mediated efflux of cholesterol from monounclear phagocytes, a stablished coronary heart disease. 3 of the variants (G596A, A2589G and G345C) are significantly increased in a population of established coronary heart disease (CHD) relative to CHD-free control subjects. The use of the provided ABC1 polymorphisms for the diagnosis and treatment of lipid disorders, cardiovascular erythematodes) is claimed, Modulation of ABC1 transcripts or protein by antisense or ribozyme technology or RNA decoys is also proved the abcops and all of the provided ABC1 transcripts or protein by antisense or ribozyme technology or RNA decoys is also
                                                                                                                                                                                                                                                                                                                                                                                                                /*tag= b

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a sequence complementary to a polynucleotide which comprises a 1'-end sequence. Where the comprises at least 15 nucleotides and the combination of the 5'-end sequence, 3'-end sequence, 3'-end sequence, 3'-end sequence, 5'-end sequence, 5'-end sequence, 5'-end sequence, 5'-end sequence, 6'-end sequence, 7'-end sequence, 6'-end seque

       detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAM10316 to AAM13628 and AAM13633 to AAM18742 represent human cDNA sequences; AAB92446 to AAM595893 represent human anino acid sequences; and AAM13629 to AAM13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                        2898 ttgcgagcgagagtgagtgggccggaccgcagagccgaccttcttctcccgg 2957

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligounclectide complementary comprises one of the 5602 nucleotide sequences defined in the specification, where the complementary strand of a polynucleotide which comprises one of of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1 east 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or alignosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the complementary and complementary and an end or alignosis of the abnormality of the full-length cDNAs. The primers are also useful for the complementary and an end or alignosis of the abnormality of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs asally without any specialised methods. AAH03165 to AAH13628 and AAH086003 rowed the abnormality of AAH031628 and AAH086003 rowed the abnormality of AAH03628 and AAH0362003 rowed the abnormality of AAH03628 and AAH0362003 rowed the abnormality of AAH0362003 rowed the abnormality of AAH0362003 rowed the abnormality 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2898 ttgcgagcgagtgggtggggcgggaccgcagagcgggccgaccttctcccgg 2957

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORP has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAS derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the MRNA because they are often obtained from oligo-dT primed cDNA ilbrarles. Such ESTS are not well suited for isolating cDNA sequences cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                        New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures -
                                                                                                                                                                                  Claim 1; SEQ ID 13690; 71pp + CD-ROM; English.

Homo sapiens.

current and a managed and a sequences ABA0925-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides of producing the novel polypeptides. The invention has a sample, and methods of identifying compounds which that the polypeptides of the invention although tower, many of the bind to polypeptides of the invention and though novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may differentiation activities, including cytokine, cell proliferation or cell differentiation activities, including cytokine, cell proliferation or cell contential therapeutic activities; stem cell growth factor activities; chemotactic or chemokinetic activities; receptor or ligand activities; or may be conditions or metastasis.

Compound the in oncogenesis, cancer cell proliferation or metastasis.

Compound the information of the preventing, treating or ameliorating medical involved in oncogenesis, center cell proliferation or ameliorating medical cancers, haematopoicate disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions, e.g., by protein or gene therapy, such conditions, e.g., by protein or gene therapy, such conditions include cancers, haematopoicated disorders (e.g., myeloid or lymphoid cell varieties in sorval, sorval, sorval, and abnormal varieties, including them) may be used to promote wound the preparation and disorders (e.g., of burns, incisions and ulcers), while those with immonodulatory activities may be used in cell survey and propeptides may be used in cell survey. Compary the companion of surfaction and product cell growth, for example, such polypeptides may be used to augment or augment of a such co autoinmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject novel human polypeptide of the invention. encoded polypeptides (AAM/8323-AAM/80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem ecll growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cencer; leukaemia; nervous system disorder; arthritis; inflammation; ss.

production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, wematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          s M, Arnould-Reguigne I, Prades C, Naudin L;
